TITLE:

The Effect of Weak Interaction Upon the Electromagnetic
Properties^{1/9} of ParticlesPERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1960,
Vol. 39, No. 4(10), pp. 1115 - 1125

TEXT: It was the purpose of the present work to investigate the contribution made by weak particle interaction to electromagnetic interaction. In the introduction, the problem as such is discussed, and the contents of the paper is given. In section 2, the graphs (Figs. 1-6) which make a contribution to the electromagnetic properties of the neutrino, the leptons (e and μ), and the baryons are investigated; the contributions are determined in orders of magnitude of the weak interaction constant for individual cases. For this purpose, two variants of the theory are studied: that of four-fermion interaction and that of the intermediate, heavy, charged X-boson. In several cases, the order of g is reduced by the introduction of the X-boson. i.e. the effect is increased. In section 3,

B006/B056

the general electromagnetic properties resulting from the Lorentz and gradient invariances of the theory, from the probability and the theory of universal weak interaction, and from the theory of the two-component neutrino are dealt with. In section 4, the interaction within the framework of the perturbation theory is investigated, and the order of magnitude of the divergence of the integrals obtained is determined. The characteristic electromagnetic properties of the particles are numerically estimated. In the case of baryons, one assumes that strong interaction replaces weak interaction already at momenta of the order of M_n (M_n - nucleon mass). In section 5, the experimentally observable particle scattering effects are discussed, especially the polarization of particles in the scattering plane, because this effect is related to parity non-conservation. Neutrino scattering by nuclei as well as the effects of new electromagnetic properties in nuclear physics are discussed. Section 6 deals with the problem of the possible modifications of the initial assumptions on weak interaction, by adding the derivative of the neutral currents to the ordinary derivative of the charge currents. The conditions under which the additional term does not lead to a decay

TITLE: On Relativistic Corrections to the Phenomenological Theory of
the Levels of Light Nuclei (O relyativistskikh popravokh v
fenomenologicheskoy teorii urovney legkikh yader)

PERIODICAL: Zhurnal eksperimental'noy i teoreticheskoy fiziki, 1959,
Vol 36, Nr 2, pp 478-480 (USSR)

ABSTRACT: Blatt and Weisskopf (Veisskopf) (Ref 1) estimated the contribution
made by consideration of relativistic effects to the theory of
the levels of light nuclei as amounting to 10-20%. At its
present stage, the meson theory offers no possibility of
satisfactorily solving this problem. A phenomenological
treatment of the problem must therefore be attempted by basing
on the general group properties of the relativistic invariance
of the quantum theory (Ref 2). The authors of the present paper
proceed from the nonrelativistic Hamiltonian

$H = \sum_n T_n + \sum_{m>n} H_{mn}$ ($T_n = p_n^2/M$, the kinetic energy of the
n-th nucleon). H_{mn} describes interaction between the nucleons
m and n. According to reference 2 consideration of

Card 1/3

SOV/56-36-2-19/63

On Relativistic Corrections to the
Phenomenological Theory of the Levels of Light Nuclei

relativistic effects (with an accuracy extending to terms of 2nd order of v/c) leads to the form
 $H = \sum_n T_n + \sum_{m>n} H_{mn} + \sum_n T'_n + \sum_{m>n} H'_{mn}$ ($T'_n = -p_n^2/2M^3$, the correction to the kinetic energy of the n -th nucleon). Further, the correction term to the interaction Hamiltonian H'_{mn} is investigated. This interaction correction formula is written down for 2 particles in the states

$$|0s_{1/2}^2 01\rangle, |0s_{1/2}^2 10\rangle, |1p_{3/2}^2 01\rangle, |1p_{1/2}^2 01\rangle$$

with $r_0 = 1.65 \cdot 10^{-13}$ cm ($\hbar\omega = 15$ Mev), the potential is written down in the form $V = V_0 (0.317 + 0.500 P + 0.183 PQ) f(r/a)$

and for the Gaussian potential course (Ref 3)

$$V_0 = -51.9 \text{ Mev}, a = 1.73 \cdot 10^{-13} \text{ cm}, f(x) = e^{-x^2}$$

Yukawa potential (Ref 1)

$$V_0 = -68 \text{ Mev}, a = 1.17 \cdot 10^{-13} \text{ cm}, f(x) = e^{-x}/x$$

Card 2/3

On Relativistic Corrections to the
Phenomenological Theory of the Levels of Light Nuclei

SOV/56-36-2-19/63

and for the square potential well (Ref 1)

$V_0 = -33.6 \text{ Mev}$, $\Lambda = 2.1 \cdot 10^{-13} \text{ cm}$. V (in kev) is calculated and compiled in a table. The correction was found to depend to a high degree on the shape of the potential and is of the order of magnitude 0.02 - 0.2 Mev for a pair of nucleons, 0.2-2 Mev for light nuclei, and 2-20 Mev for heavy nuclei. For nuclear levels it is of the same order as for nucleon pairs. There are 1 table and 3 references, 2 of which are Soviet.

TITLE: Unitary and spin content of SU(6) supermultiplets

SOURCE: USSR. Gosudarstvennyy komitet po ispol'zovaniyu atomnoy energii. Institut teoreticheskoy i eksperimental'noy fiziki. Doklady, no. 337, 1965. Unitarnoye i spinovoye soderzhaniye supermultipletov SU(6), 1-40

TOPIC TAGS: unitary symmetry, particle symmetry, quark model, nuclear model

ABSTRACT: A method is developed for determining the number of unitary multiplets with a given spin in a supermultiplet of the SU(6) group. Some of the properties of representations of group SU(n) are summarized and a method is described for narrowing SU(6) representations into the subgroup SU(3) \otimes SU(2), which corresponds physically to an interaction which conserves SU(3) symmetry. This method is used for compiling tables which include reductions of all SU(6) representations given by Young diagrams with total number of cells $f = 3, 6$ and 9 . SU(6) representations are reduced with respect to subgroup SU(4) \otimes SU(2) \otimes U(1), which corresponds to an

Card 1/2

interaction which separates Λ -quarks with non-zero strangeness from p - and n -quarks. The $SU(4)$ supermultiplets obtained in this reduction are identical to the supermultiplets which were proposed by Wigner in 1937. A table for the reduction of the Kronecker product of the simplest representations of group $SU(6)$ is also given.

TOPIC TAGS: particle symmetry, unitary symmetry, group theory, mathematic operator

ABSTRACT: A simple method is proposed for finding Casimir operators C_p of arbitrary order p for $U(n)$ and $SU(n)$ groups. These groups were selected because they are the most interesting from the standpoint of the physicist. The theoretical method proposed in the paper is also applicable to the other classical groups. A formula is derived for the operator C_p :

$$C_p(f_1, \dots, f_n) = \sum_{i,j=1}^n (a^p)_{ij}$$

This formula theoretically reduces the problem of calculating the eigenvalues of

Card 1/2

L4071-66

ACCESSION NR: AT5024121

3

Casimir operators to raising the matrix a to the p -th power. This formula is also useful for calculating the general properties of Casimir operators. The formula is used for establishing the relationship between the respective Casimir operators for groups $U(n)$ and $SU(n)$. The explicit values of all C_p operators are given for completely symmetric and completely anti-symmetric representations. The basic formula is converted into a form which is convenient for computations and several first members of the C_p expansion are determined with arbitrary p . The authors study the relationship between C_p and the symmetrized operator I_p (M. Umezawa, Nucl. Phys., 48, 111, 1963; 53, 4, 1964). A summary is given of specific formulas for all C_p operators with $p \leq 6$ and I_p operators with $p \leq 5$. The authors are sincerely grateful to I. S. Shapiro for discussing the results of this work. Orig. art. has: 55 formulas. 94,55

ABSTRACT: The groups $U(n)$ and $SU(n)$ have been employed most successfully for the description of the symmetries of elementary particles.¹⁹ A critical problem is that of finding all invariant operators which may be formed by the generators of the group. Although the problem has been studied before, explicit expressions for the characteristic values of invariant operators of arbitrary order have not been given. A solution for that problem is offered here. "The authors express their sincere gratitude to I. S. Shapiro for his discussion of the results of this paper." Orig. art. has: 10 formulas.

179-198TOPIC TAGS: group theory, Lorentz transformation, Green function, quantum mechanics

ABSTRACT: The latent (dynamic) symmetry of the hydrogen atom is considered from the point of view of group theory. It is shown that transition from the compact group $D(4)$ to its noncompact analog (Lorentz group) makes it feasible to describe the discrete as well as the continuous spectrum. In this case the wave functions of the continuous spectrum with a given energy $E > 0$ lead to an infinite-dimensional irreducible representation $D(0, p)$ of the Lorentz group ($p = \sqrt{2/E}$), which belongs to the fundamental series of the unitary representations. Wave functions of discrete spectrum states with a principal quantum number n lead to a finite-dimensional representation $D((n-1)/2, (n-1)/2)$ of the Lorentz group. A wave-function symmetry specific for the Coulomb potential is found for continuous and discrete states. The special case of states with $E = 0$ when the Lorentz group degenerates into the Galilean group

Card 1/2

I 14550-66

ACC NR AP6004936

is also considered. An expansion of the Coulomb Green's function (for $E > 0$) into irreducible representations of the Lorentz group is obtained. An explicit expression for the Green's function of the Kepler problem in n-dimensional space is derived and the geometric meaning of the symmetry possessed by the Coulomb wave functions is clarified. Prilozheniye, v. 2, no. 1, 1965, 34-37

TOPIC TAGS: group theory, operator equation, orthogonal function, mathematic transformation

ABSTRACT: The article deals with the problem of finding invariant operators (Casimir operators C_p) which can be constructed from the generators of a given group of transformations. Since no explicit expressions for the eigenvalues of the operators C_p with $p > 2$ were ever published (with the exception of the operator C_4 for the group $Sp(4)$), the authors derive explicit expressions for C_p with $p = 2, 3$, and 4, valid for any of the groups $O(2n + 1)$, $O(2n)$, and $Sp(2n)$. Since these are groups of rank n , each contains n independent Casimir operators. The operators C_p with odd p can be expressed in terms of C_{2q} with $2q < p$. In the case of the groups $O(2n + 1)$ and $Sp(2n)$, the operators C_2, C_4, \dots, C_{2n} form a complete set of independent invariant operators. A somewhat different approach is used for the group

ABSTRACT: An asymptotic form of the wave function $\psi_{\ell m}(r)$ at $r \gg 1$ has been found for the potentials of the type $V(r) \sim \frac{V_0}{r^2} - \frac{\rho^2}{r^2}$. The character of the singularity at the point $\rho^2 = -x^2$ was determined. A connection was found between the coefficient in the asymptotic formula derived and the residue of the scattering matrix $\Lambda_c(k)$ at the pole $k = i\rho$, which

ABSTRACT:

The authors describe ancient necks of volcanos which were active in the Devonian age. They were discovered by the authors and A. I. Aleksandrov in the north-western part of the Minusinsk depression. Thick blankets of effusive rocks in Lower- and Middle-Devonian deposits were formed by the successive eruption of these volcanos. The necks were filled with rocks of similar composition, texture and structure with those found in the effusive rocks. Three more-or-less-sharply-defined zones were found in each neck, each zone filled with different rock. The study of accumulated rocks showed that they were formed by successive

Blood transfusion after strichnine poisoning. A. G. Karavayev and A. E. Perel'shten. *Med. exp. (Ukraine)* No. 1, 65-00 (1957). Doses of strichnine (0.0005 g./kg. body weight) were injected subcutaneously into dogs. Bleeding always shortened the lives of the poisoned animals. Blood transfusion (with or without bleeding) did not prevent death of the poisoned dogs.

TITLE:

Concerning the Proof of Thermodynamic Similarity

PERIODICAL: Kholodil'naya tekhnika, 1960, No. 3, pp. 35-38

TEXT: The problem of thermodynamic similarity has been investigated sufficiently in Soviet and foreign literature (Refs. 3-10). The article aims at proving the suggested criteria with the aid of the π -theorem which has not yet been applied to thermodynamics. The π -theorem is briefly explained. An equation is derived with the aid of this theorem for an ideal gas, the specific volume of which is determined by the temperature, the pressure and the universal gas constant: $v = f(p, T, R)$, (1), where $n = 4$, $l = 4$, $k = 3$ (m, kg, °K). The designations n , l , k are taken over from the state equations proposed by Van der Waals, Clausius, Bertelot and Diterici. The equation $v = \text{const}$ corresponds to the functional dependence $v = f(p, T, R, v_{cr}, T_{cr}, v_{cr})$ (3), where the index cr refers to the critical parameters. [Abstractor's note: Subscript cr (critical) is a translation from the Russian K_p (kriticheskiy)].

AUTHORS: Perel'shteyn, I., Kovalev, A., Engineers**TITLE:** Enthalpy and Heat Capacity of Certain Candy Goods**PERIODICAL:** Kholodil'naya tekhnika, 1959, Nr 5, pp 33-36 (USSR)**ABSTRACT:** The article describes experimental investigations conducted with a view to determining the enthalpy and heat capacity in the range of temperature from -10 to 40°C of three kinds of chocolate (milk chocolate "Extra", "Sport", "Soya") and of a sugar coating. For the calorific tests the method of the adiabatic calorimeter was applied, which almost completely eliminates loss of heat to the surrounding medium. A description is given of the calorimeter and of the electronic system of preventing heat losses. The mentioned candy goods contain ingredients, which at rising temperature change their phase state. To determine the heat capacity of such substances the heat interval must be very small, viz. 3°C in the test in question. The values of enthalpy and heat capacity, as resulting from the investigation, are shown in table 2. It is evident from graph 3 that the heat capacity of chocolate "Extra" and "Sport" have one maximum, while "Soya" has two maximums, which correspond with the temperature intervals of the most intensive phase changes of the basic ingredients;

Card 1/2

SOV/66-59-5-8/35

Enthalpy and Heat Capacity of Certain Candy Goods

to the left of the maximum, the greater part of the mixture is in a solid state, to the right - in a liquid state. According to Ridel [Ref 3], Olenov [Ref 4] and several other scientists the heat capacity of various fats and oils which belong to the multi-component mixtures is dependent upon temperature. The heat capacity of sugar coating is very much less contingent on temperature than chocolate, while remaining constant between 15 and 40°C, due to the fact that in this case no phase changes occur. There are: 1 diagram, 1 circuit diagram, 2 tables, 1 graph and 5 references, of which 4 are Soviet and 1 German.

thermodynamic properties of sulfur hexafluoride (SF_6), a purportedly new working fluid in cold engineering at low temperatures (to $-45^\circ C$) and in heat-power engineering at steam-power and gas-turbine plants. The following data on the thermodynamics of SF_6 were determined: 1) the vapor pressure curve from -31° to critical point; 2) an equation for the saturated vapor pressure curve; 3) the specific volume of liquid SF_6 from -31° to $+40^\circ$; 4) the specific volume of dry saturated vapor from -31° to $+40^\circ$, and of superheated vapor from -31° to $+100^\circ C$ and at pressures of from 2.11 to 32 atm; and 5) Beattie-Bridgeman equations of state. Data on the saturated vapor from -50 to $+40^\circ$ per each 2° , and on the superheated vapor at temperatures of from -50 to $+100^\circ$ per each 5° and at pressures of from 2.11 to 32 atm per each 0.5 - 2 atm are tabulated; pressure-volume, entropy, and enthalpy diagrams are plotted. Data on the theoretical energy and volume characteristics of NH_3 , Freon-22, and SF_6 are reviewed, and theoretical values of the specific cold-productivity (kcal/kw-hr) and

TITLE: Precast Reinforced Concrete in the Polish People's Republic (sooriny zhelezobeton v Pol'skoy narodnoy respublike).

PERIODICAL: Beton i Zhelezobeton, 1957, Nr.10. pp.406 - 409. (USSR).

ABSTRACT: The construction of the 11-storey university library building in Lodz is described in this article. It is based on a system of skeleton and panel. The pre-cast skeleton forms a three-bay frame connected by 10 cm thick floor slabs. The frame consists of three elements, two 'H' shaped units with columns and one middle beam, the 'H' shaped unit weighing 3.2 tons (Fig.1). The panels are faced and have window perforations. The jointing of units is carried out by welding the main steel reinforcement together. The building is assembled by the use of two tower cranes of 45-ton capacity (lifting moment). Each storey took five days to assemble. Fig.2 shows other constructions used for multi-storey buildings. In this instance, no beams, but only columns and slabs were used. The building was designed for 1,500 kg/m² of superimposed load. The columns terminate

Card 1/3

Precast Reinforced Concrete in the Polish Peoples
Republic

97-10-7/14

with capitals in the shape of diagonal cantilevers which support diamond shaped ribbed slabs which, in turn, support central rectangular slabs. When the columns are based on a 5m x 5m grid the consumption of steel per m^2 of this floor construction is 20.8/kg, and that of concrete 0.145 m^3 . The engineering workshop of TEI's in Lodz is mentioned as a further example of a large construction. It is assembled from pre-cast units with a total volume of 350,000 m^3 and designed as a four-bay "box-system". The boiler house columns are 31 m high "box-section", weighing 96 tons (Fig.5). Double columns weighing 17 tons were used for the workshop (Fig.3). These columns support pre-stressed beams carrying bridge cranes of 7-ton capacity. Concrete Mark 200 was used for these constructions. The assembly was carried out by the Gantry crane (Fig.6) mounted on rails. The frame of the boiler house, as well as the workshop, has a span of 24 m and 27 m weighing respectively 3.93 tons and 13.9 tons. In this case the concrete used was Mark 500. Also illustrated is a silo in Jaroshev (Fig. 7), being 105 m x 12.8 m in plan, 19.2 m high, and consisting of two rows of eighteen silos, each of 153 ton

Card 2/3

97-10-7/14

• **Precast Reinforced Concrete in the Polish People's Republic**

capacity. The sports arena "Staleva Volya" is an example of a corrugated vault of assembled reinforced concrete type spanning 46 m, height 13 m. The sections are joined together by grouting in the projecting reinforcement. A segmentary truss, used when it is necessary to span more than 30 m, is illustrated. It was used in the exhibition hall in Poznan. At a scientific conference organized by a committee of engineers of the Polish Academy of Science in 1956 on the subject of sectional constructions, the following points were discussed. Economy of materials, steel corrosion and economical calculations and planning of pre-stressed concrete constructions. There are 11 Figures.

PEREL'SHTEYN, S.A.

PUTYATO, V.T., inzhener.; RAYEV, V.N., inzhener; PEREL'SHTEYN, S.L.

Standard plan refrigerating plant built of precast reinforced concrete.
Nov.tekhn. pered.op. v stroi. 18 no. 11:5-8 N '56. (MIRA 10:1)
(Refrigeration and refrigerating machinery) (Precast concrete
construction)

PEREL'SHTEYN, Ya.I., dozent, kand. tekhn. nauk

Evaluating adjusted results of measurements. Sbor. nauch. trud.
KGI no.10r207-210 '61
(MIRA 17:8)

PEREL'SHTEYN, Ya.I., dotsent, kand.tekhn.nauk

Evaluation of the results of measurements made in mine surveys.
Sbor. nauch. trud. KGRI no.7:207-214 '59. (MIRA 16:9)
(Mine surveying)

PEREL'SHTEYN, Ya.I., dots., kand.tekhn.nauk

Criteria for the absence of common errors of measurement and for equal accuracy of the latter. Nauch.dokl.vys.shkoly; gor.delo.no.4:75-78 '58.

(MIRA 12:1)

1. Predstavлено кафедрой геодезии и маркшейдерского дела Криворожского горнорудного института.
(Mine surveying)

VORONTSOV, B.N.; PEREL'SHTEYN, Ye.L; DONDE, Yu.Ya.; DRUKER, Z.I.

New principles for determining the compulsion of official
testing of measuring instruments. Izm.tekh. no.5:58-61
My '61. (MIRA 14:5)

1. Zamestitel' Nachal'nika TSentral'noy izmeritel'noy laboratori
Gor'kovskogo avtomobil'nogo zavoda (for Vorontsov). 2. Nachal'nik
laboratori elektricheskikh izmereniy zavoda DINAMO imeni S. M.
Kirova (for Druker).

(Measuring instruments--Testing)

PEREL'SHTEYN, Ye.L.

Strengthening of official inspection is one of the basic
objectives. Izm.tekh. no.4:53-55 Ap '60.
(MIRA 13:8)

(Testing laboratories)

PERRL' - SHTEYN, Ye. I.

IVANOV, K.I.; IZHETSKIY, A.A.; VILYANSKAYA, Ye.D.; ALEKSANDROV, A.N.; PERRL'-
SHTEYN, Ye.I.; PREDKOV, A.A.

Testing an alkyl-phenol antioxidant additive in transformers. Khim.i
tekhn. topl. no.9:51-56 S '56. (MLRA 9:10)

1. Vsesoyuznyy teplotekhnicheskiy institut imeni Dzerzhinskogo.
(Antioxidants) (Insulating oils)

PEREL'SHTEYN, Z.M.

MURASHEV, V.A., prof., doktor tekhn.nauk; MIRONOV, S.A., prof., doktor tekhn.nauk; ALEKSANDROVSKIY, S.V., kand.tekhn.nauk; TAL', I.Z., kand.tekhn.nauk; DMITRIYEV, S.A., kand.tekhn.nauk; MULIN, N.M., kand.tekhn.nauk; SIGALOV, E.Ye., kand.tekhn.nauk; NEMIROVSKIY, Ya.M., kand.tekhn.nauk; TABENKIN, N.L., inzh. [deceased]; KALATUROV, B.I., kand.tekhn.nauk; BRAUDE, Z.I., inzh.; KRYLOV, S.M., kand.tekhn.nauk; POKIN, K.F., doktor tekhn.nauk; GUSEV, N.M., prof., doktor tekhn.nauk; YAKOVLEV, A.I., inzh.; KORENEV, B.G., prof., doktor tekhn.nauk; DERESHEVICH, Yu.V., inzh.; MOSKVIN, V.M.; LUR'YE, L.L., inzh.; MAKARICHEV, V.V., kand.tekhn.nauk; SHEVCHENKO, V.A., inzh.; VASIL'YEV, B.F., inzh.; KOSTYUKOVSKIY, M.G., kand.tekhn.nauk; MAGARIK, I.L., inzh.; IL'YASHAEVSKIY, Ya.A., inzh.; LARIKOV, A.F., inzh.; STULOV, T.T., inzh.; TRUSOV, L.P., inzh.; LYUDIKOVSKIY, I.G., kand.tekhn.nauk; POPOV, A.N., kand.tekhn.nauk; VINOGRADOV, N.M., inzh.; USHAKOV, N.A., kand.tekhn.nauk; SVERILOV, P.M., inzh.; TER-OVANESOV, G.S., inzh.; GLADKOV, B.N., kand.tekhn.nauk; KOSTOCHKINA, G.V., arkh.; KUREK, N.M.; OSTROVSKIY, M.V., kand.tekhn.nauk; PEREL'SHTEYN, Z.M., inzh.; BUKSHTEYN, D.I., inzh.;

izd-va; GORYACHEVA, T.V., red.izd-va; MEDVEDEV, L.Ya., tekhn.red.

[Handbook for designers] Spravochnik proektirovshchika. Pod ob-
shchei red. V.I.Murasheva. Moskva, Gos.izd-vo lit-ry po stroit.,
arkhit. i stroit.materialam. Vol.5. [Precast reinforced concrete
construction elements] Sbornye zhelezobetonnye konstruktsii.
1959. 603 p.

(MIRA 12:12)

1. Akademiya stroitel'stva i arkhitektury SSSR. Nauchno-issledo-
vatel'skiy institut betona i zhelezobetona, Perovo. 2. Deystvitel'-
nyy chlen Akademii stroitel'stva i arkhitektury SSSR (for Murashev,
Gvozdev, Mikhaylov, V.V., Pasternak, Shubin). 3. Chlen-korresp. Aka-
demii stroitel'stva i arkhitektury SSSR (for Mironov, Gusev, Moskvin,
Kurek).

(Precast concrete construction).

PEREL'SON, A.G.

Hemorrhage from the internal carotid artery following conservative-radical ear surgery. Vest. otorinolar., Moskva 15 no.4:79-80 July-Aug 1953.
(CIML 25:1)

1. Of the Otolaryngological Division of the Republic Hospital, Mal'chik.

PEREL'SON, A.G.

Hemorrhage from the internal carotid artery following conservative-radical
ear surgery. Vest.oto-rin. 15 no.4:79-80 Jl-Ag '53. (MIRA 6:9)

1. Oto-laringologicheskoye otdeleniye respublikanskoy bol'nitsy, Mal'chik.
(Ear--Surgery) (Carotid artery) (Hemorrhage)

PEREL'SON, I.Ye.

Amino acid composition of pollen in some honey plants and
pollen-bearing plants. Biul. Glav. bot. sada no.46:69-74
'62. (MIRA 16:5)

1. Nauchno-issledovatel'skiy institut pchelovodstva, pos.Rybnoye
Ryazanskoy oblasti.
(Pollen) (Amino acids) (Bees--Feeding and feeds)

SHONKIN, Yu.N.; LI TSEV, B. Ye.; PEREL'SON, M. Ye.

Integral intensities of carbonyl bands in the infrared spectra
of some cyclic compounds. Izv. AN SSSR Ser. khim. no.11:2114
N '64 (MIRA 18:1)

I. Institut chumil' pol'stroykh soyedineniy AN SSSR i Vsesoyuznyy
Institut lekari'vennykh i aromaticheskikh rasteniy.
